

Common Indentation Errors to Avoid

- Forgetting to indent.
 - If you do forget, Python will remind you.
- Forgetting to indent additional lines.
 - There will be times when your program will run but you will not get the output you expected. In some of these cases you may have forgotten to indent some of your lines so recheck.
- Indenting unnecessarily.
 - If you accidentally indent a line that doesn't need to be indented you are going to hear about it from Python.
